Saskatchewan

Foreword

91-01578/

As Saskatchewan enters the 1990s, the prospects for the economic future are mixed. The possibility of a North American recession and unstable commodity prices will all add to the near term challenges faced by the Province.

Saskatchewan families, business and farmers are confronted with the challenges of new economic realities. With these challenges comes opportunities — opportunities for individuals to participate in and develop their economy to secure Saskatchewan's future.

The foundation of the new direction of economic diversification in Saskatchewan has been built on individuals participating in their local and provincial economy.

The introduction of Community Development Bonds has been one of the many steps to strengthen further and build Saskatchewan communities. The Government has also sought out joint venture partners to expand the economic base of the Province.

Saskatchewan's economic growth in 1990 will again be strong, mainly because of a continued recovery in crop production and strong expansion in our investments for the future.

Despite this growth, our farmers face the burden of low commodity prices, high debt, and the after-effects of the drought through a period of excessive interest rates, an overvalued dollar and unfair competition. Economic and financial difficulties in rural Saskatchewan face all communities, both large and small.

The economic challenges of the 1990s will be to continue to diversify and strengthen the economy.

Honourable Lorne H. Hepworth
Minister of Finance

Price: In-Province $5.00 Out-of-Province $10.00

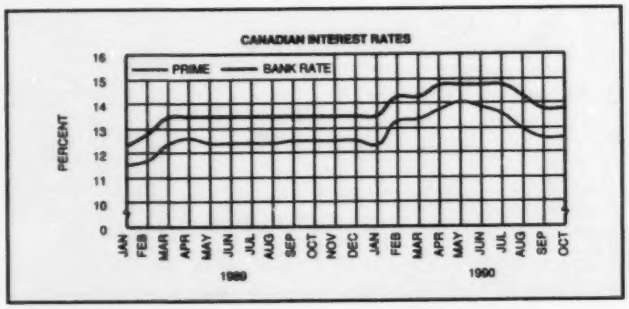
World Economic Developments

After several years of rapid expansion, a global economic slow-down is beginning to take hold. This slow-down reflects, in part, the effects of continuing high international interest rates, as well as declining prices for basic commodities other than crude oil.

The recent spike in oil prices will dampen growth and add to inflation in our major industrialized trading partners. Nevertheless, continental Europe and Japan will stay on a firm growth track. Strong business investment associated with the move to a single European market in 1992 and redevelopment of East Germany will maintain the forward momentum in Europe. Japan's economic activity has been underpinned by strong investment growth and continues to be fuelled by steady employment growth and buoyant consumer demand.

Since 1988 the Canadian economy has slowed. There have been a number of factors at work reducing economic growth in Canada. High interest rates, restrictive federal fiscal policy, slower economic growth in our major trading partners and an overvalued dollar have weakened the Canadian economy. The near-term prospects for the Canadian economy are weak; the national economy is likely to continue to shrink through the second half of 1990. The recession in Canada could be prolonged by a coincident recession in the United States.



The Bank of Canada has cautiously begun to ease interest rates. Nevertheless, monetary policy is very tight. The bank rate is still close to levels prevailing at the end of 1989 and the Canadian dollar, while quite volatile, has been supported at high levels by foreign investment inflows in the wake of the Middle East crisis. At current interest and exchange rate levels, domestic activity will continue to soften.

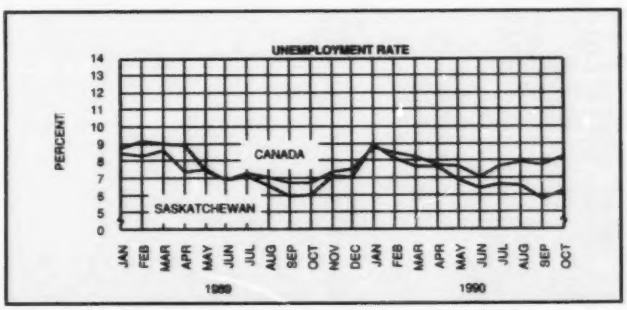
The Saskatchewan Economy in 1990

Provincial economic growth continued to rebound in 1990 in response to strong investment activity, a sharp rise in oil prices and heightened agricultural production from drought depressed levels.

Total employment for the January to October period averaged 451,000 persons, an increase over the same period last year. Agricultural employment was up an average of 6,000 per month, compared to the first ten months of 1989, reversing the downward trend of the previous two years.

Total non-agricultural employment declined an average of 3,000 persons to 367,000 per month for the January to October period, compared to the same period in 1989. The strongest employment gains occurred in the service sector where, on average, 3,000 more people per month were employed in 1990 compared to 1989. The transportation, communications and utilities sector, on average, showed an increase in employment of 1,000 for the period. Employment in manufacturing and construction remained, on average, at 1989 levels for the period. Employment in all other sectors was, in aggregate, down an average of 6,000 persons per month during the January to October period, compared to 1989.

The total number of unemployed persons decreased by an average of 3,000 per month from last year, to



average 34,000 over the January to October period. The average unemployment rate for year-to-date 1990 was 7.0 per cent, down from 7.5 per cent for the same period in 1989. Saskatchewan consistently maintained the third lowest unemployment rate in Canada during 1990. The provincial population was 1,000,300 as of July 1, 1990, down 7,300 from the previous year. Interprovincial and international migration statistics indicate that 5,435 more people left the province in the first half of 1990 than entered, up from a net out-migration of 5,147 people during the first half of 1989.

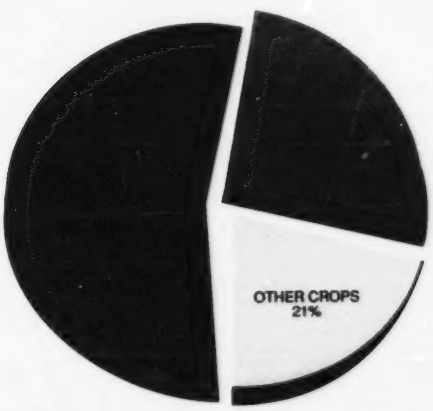
Agriculture

The 1990 crop year brought with it mixed success. Saskatchewan produced an above average crop — the second largest ever produced in the province. However, grain prices declined substantially from the levels of a year ago.

Near perfect harvest weather conditions throughout September enabled Saskatchewan producers to take off one of the best quality crops on record in 1990. Production of the major grains, oilseeds and specialty crops in 1990 is estimated at 25.2 million tonnes, up 33 per cent from the 1989 production of 18.6 million tonnes and 28 per cent over the 1980-89 average production of 19.3 million tonnes. The record production was in 1986 when 25.8 million tonnes were produced. Except for winter wheat, 1990 seeded acreage and production of all crops were above the ten-year averages. Unfortunately, some western and central areas of the province did not receive the required rains and had a below average crop.

Spring wheat production was up 46 per cent from 1989 with 13.8 million tonnes harvested. Durum production rose nine per cent over 1989 with 3.3 million tonnes harvested. Oats, barley and rye production also increased relative to 1989. Canola production was up 12 per cent. Yields of all the major grains and oilseeds and specialty crops were up in 1990.

Cattle inventories increased slightly with 2.16 million head of cattle and calves on Saskatchewan farms on July 1, 1990 — up one per cent from July 1, 1989. Hog numbers were estimated at 790 thousand head — down five per cent from a year earlier. The number of sheep and lambs was estimated at 56 thousand head, up eight per cent from July, 1989.



Cattle prices remained strong in 1990 and hog prices improved from 1989. The countervail duty imposed on Canadian pork exports in 1989 was referred to the Bi-National Trade Panel. The Trade Panel ruled that the United States had improperly measured subsidies to the Canadian hog sector, and directed that the subsidies be remeasured. The U.S. International Trade Commission is standing by its initial ruling that Canadian subsidies pose a threat to United States producers, a decision which Canada is appealing.

Total farm cash receipts from 1990 are forecast at $4.10 billion, 17 per cent of which will come from government programs. Canada and Saskatchewan shared the cost of a $277 million payment to ensure farmers were able to get this year's crop in the ground. Production expenses continued to increase in 1990, largely due to the crisis in the Middle East.

Natural Resources

Following a cumulative decline of over 25 per cent in world oil prices over the first half of the year, oil prices almost doubled in August after the meeting in late July of the Organization of Petroleum Exporting Countries (OPEC) and the invasion of Kuwait by Iraq on August 2. The future course of oil prices is highly uncertain as it depends crucially upon the evolution of the political and military situation in the Middle East. Despite a cautious industry attitude, the total number of oil wells drilled in Saskatchewan is expected to increase by about 60 per cent from the very suppressed levels in 1989 (725 wells versus 452 in 1989). Interest and activity surrounding the new horizontal drilling technology increased significantly in 1990. Approximately 75 horizontal wells are expected to be drilled in 1990, compared to 13 in 1989 and 3 in 1988. Horizontal wells have shown promise with regard to higher productivity, higher profitability and higher oil recovery rates.

Saskatchewan's market-oriented natural gas policy has facilitated industry growth since 1987. Gas sales are forecast to rise 16 per cent in 1990, with most new sales to consumers outside Saskatchewan. Investment in 1990 is forecast at $102 million, reflecting an estimated 600 completed gas wells drilled.

The potash industry is expected to have an average year in 1990. Potash sales by Saskatchewan in 1990 are expected to equal last year's level of 6.3 million tonnes. Sales to China improved, but the economic difficulties in Brazil and increasing competition from the Soviet Union is expected to restrain offshore sales. Potash prices declined in response to the soft potash market of the past 18 months. Potash prices, however, remained significantly higher than the low prices

established in the mid-1980s. Temporary mine shutdowns to correct inventory levels helped to maintain prices.

Uranium production over the first three quarters of 1990 was 4.9 million kilograms of uranium oxide, down from the 7.3 million kilograms produced in the first three quarters of 1989. Collins Bay has remained shut down for the year and, with production 30 per cent below the same period last year, year end totals are expected to be appreciably lower than for 1989. However, 1990 sales volumes have been very similar to the comparable period in 1989, and if this trend continues to the end of the year, 1990 sales could exceed production by a significant amount, reflecting a draw-down in inventories.

Coal production in Saskatchewan in 1990 continues to decline from record production levels of 12.1 million tonnes reached in 1988. In 1990 coal production is expected to decline 1.1 million tonnes from 10.8 million tonnes in 1989. This 10 per cent decline from 1989 levels and 20 per cent decline from 1988 levels represents the increase in water available for hydroelectric power generation, reducing coal demand for thermal electricity generation in Saskatchewan and in export markets.

Gold and base metal exploration expenditures for 1990 are forecast to be around $20 million, down from $30 million in 1989. This decline is consistent with the national trend. However, this sector has had recent successes. These include better than expected gold production at two gold mines in the La Ronge area during 1990, and the start up of the nearby Jasper Mine. Two other mines in the area are proceeding with development work. Other gold properties in the La Ronge Gold Belt are in advance exploration or feasibility stages. Estimated reserves at the McIlvenna Bay zinc-copper deposit grew to over 10 million tonnes. This represents the biggest reserve of these metals discovered in the Saskatchewan Shield since the world class Flin Flon mine was found in the 1930s.

Construction

The total value of building permits issued in Saskatchewan during the first eight months of 1990 was down marginally from 1989 to just over $351 million. The value of commercial permits was up 77 per cent, with industrial, residential and institutional and government permits all down.

To the third quarter of 1990, Saskatchewan recorded combined urban and rural housing starts of 1,214 units. This represents a 22 per cent decline from that recorded for the same period last year. The Saskatchewan housing market continues to remain affordable. The average starter house price is around $62,000.

Manufacturing and Technology

The value of manufacturing shipments slipped 4.6 per cent during the first eight months of 1990, largely due to weaker prices for semi-finished products from the wood and food sectors. In spite of weak revenues, the industry made significant investments in industrial plant, machinery and equipment. The Statistics Canada investment intentions survey shows that Saskatchewan manufacturers planned to spend $761 million during 1990, up from only $444 million in 1989. The upswing in investment was the result of a number of major projects beginning or continuing, including the Saferco fertilizer plant in Belle Plaine and the Bi-Provincial heavy oil upgrader in Lloydminster. In addition, a large number of smaller projects created new industrial capacity and jobs in a variety of communities: Delsa Foods in Delisle, West Coast Reduction in Saskatoon, Midwest Glass in Swift Current, Mifab Modular in North Battleford, Shaw Pipe Protection in Regina and Canadian Quill Natural Spring Water and Vis-a-Vis Resources in Wynyard.

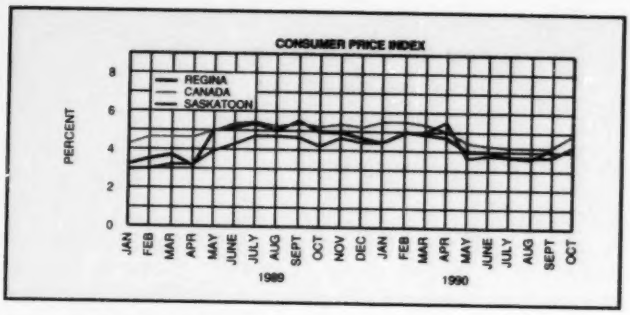
The advanced technology sector continued to experience healthy growth in 1990 with sales from Saskatchewan's 200 technology-intensive firms nearing $650 million and employment exceeding 3,500. This growth is primarily due to the successful expansion in national and international markets. Many Saskatchewan companies, including SED Systems, SCI-TEC Instruments, Develcon Electronics, Philom Bios and Generation Five Technology, are world leaders in the development and marketing of high-technology goods.

Tourism

The provincial tourism industry continued to develop and expand during 1990. The number of tourist visitations increased during the year. As well, significant expansion and new development continued at Wanuskewin Heritage Park near Saskatoon, at destination resorts at Manitou, Meadow Lake Provincial Park, Cypress Hills and at a number of northern sites.

Prices

Consumer price inflation remained moderate over the year. The overall index of consumer prices in Regina rose an average of 3.7 per cent in the first 10 months of 1990, compared with a 3.8 per cent increase over the same period last year. Saskatoon prices rose 3.9 per cent, slightly faster than the 3.5 per cent increase in



1989. Inflation moderated through the middle part of the year as the effects of previous federal indirect tax increases had been absorbed. It is expected that inflation will rise modestly in the latter months of the year as the effects of higher oil prices are more clearly felt.

Outlook

Even though we have had one of the best crops on record, realized net farm income is down substantially. Next year, a return to a normal crop will mean even lower farm income. In these difficult times, the Government of Saskatchewan remains committed to the protection of Saskatchewan farmers faced with subsidy wars, natural disasters and high interest rates.

The commitment to longer term development was strengthened by government involvement in the current agricultural review process. New safety net programs for grains and oilseeds are being developed. The government is lobbying actively for a successful outcome to the current round of multilateral trade negotiations under the General Agreement on Tariffs and Trade (GATT).

The upcoming year will continue to highlight the importance of diversification and development to the Saskatchewan economy. The construction of major manufacturing facilities such as the Lloydminster heavy oil upgrader and Saferco will be at their peak next year thus increasing demand for Saskatchewan goods and services.

Diversification initiatives have also been channelled to all sectors and regions of the province. With innovative financing systems such as Community Bonds, decision making about community development and diversification has been re-established at the local level. Through co-operation and initiative, further diversification will continue to provide for a more stable and prosperous future for Saskatchewan people.

Saskatchewan Economic Accounts

The Saskatchewan Bureau of Statistics has developed a set of economic accounts which can be used to trace the development and growth of the Saskatchewan economy.

The purpose of the accounts is to measure the value of economic activity in each sector of the economy. This is done by means of a balancing set of accounts similar to the annual income and expenditure statements of a commercial enterprise.

The accounts have many useful functions. They consolidate information which is now provided through a number of scattered sources and organize it into a central framework. This allows many kinds of economic analysis to be performed ranging from monitoring current economic performance to analysis of structural change in the economy.

The Saskatchewan Bureau of Statistics has available upon request, many more detailed tables and other information concerning the Saskatchewan Economic Accounts.

Saskatchewan Economic Accounts

Saskatchewan Gross Domestic Product (GDP) measures the total value of goods and services produced in the province. By removing the effects of inflation (or deflation) it is possible to measure the volume of output.

In 1989 the Saskatchewan economy grew by 6.6 per cent. After adjusting for price changes, Saskatchewan's real GDP increased by 6.2 per cent. Both farm and non-farm inventories increased substantially over 1988. Farm inventories and grain in commercial channels accounted for 86.5 per cent of the positive growth, non-farm inventories contributed 3.6 per cent, government current expenditures 7.2 per cent and personal expenditures 2.7 per cent. Exports declined 11.7 per cent, reflecting reduced demand for the province's natural resources, while imports declined 4.7 per cent.

Final domestic demand for goods and services by individuals, the government and for investment purposes fell by one per cent in 1989 compared to 1988, after adjustment for inflation. Personal expenditures on consumer goods and services in real terms, showed little growth (0.5 per cent) in 1989. Real government expenditures rose by 3.5 per cent in 1989. Real gross fixed capital formation declined 8.1 per cent. Business investment declined in all areas with the largest decline in non-residential construction at 21.6 per cent.

This document presents an update to the economic accounts since the release of the government's annual Economic and Financial Position of August 1990. Periodic revisions are common to all economic series to improve the accuracy, reliability and consistency of the data. In the latter part of 1990 Statistics Canada and other statistical agencies conducted a major revision to their economic accounts. In order to distinguish the effects of price changes from changes in the volume of goods and services produced, constant dollar, otherwise known as real economic accounts, are constructed. The base year for national and provincial economic accounts is now 1986. Price indices were changed so that 1986 prices are now equal to 100.

This summer the national economic accounts were re-based to reflect 1986 prices. The provincial economic accounts were re-based this fall. This has changed the relative weight of individual items within real GDP.

The biggest effect of this re-basing was to increase the real growth rate in 1988 from -4.5 per cent on a 1981 basis to 1.6 per cent on a 1986 basis. The principal reason for this change is due to the federal regulatory framework that prevailed in 1981 for oil. The two price system for oil in effect in 1981, gave far more weight to exports abroad than to exports to the rest of Canada. Since the number of barrels of oil exported abroad fell in 1988 relative to 1987 the 1981 system showed a much greater decline in the real export of oil than does the 1986 system. Consequently, real economic growth appears to be higher when the accounts are re-based to reflect 1986 prices.
